

Vision for Humanity

Equation Document for Humanity (18/4/2012)

Vision for Humanity Shift from an equation of global decrease to Infinite global increase.

These human equations represent in broad terms ways of human thinking and processing - how we (humanity) see the world and how we construct our world.

A shift away from what this equation $d_G^\infty = e_G r$

represents to what this equation $I_G^\infty = E_G R^\wedge$ represents is ultimately is a shift from a world of intolerance, depletion and fear to a world of increasing peace prosperity and joy.

Or a shift from a world of competition and separation to a world of co-creation and unity.

Importantly this is the main key shift needed to precede a successful recreation of all of humanity's social constructs in order for everyone's needs to be met, and to create a sense of global family.

Decrease represents outcomes of depleting value or diminishing returns, slowly eroding over time what was originally there; personally, socially and environmentally.

Increase represents outcomes of genuinely increasing value or accumulative returns, incrementally adding over time to what was originally there; personally, socially and environmentally.

To understand the significance of what $I_G^\infty = E_G R^\wedge$ presents to us, we first need some perspective into how $d_G^\infty = e_G r$ is operating in the world.

As in general terms, it is the primary way humans have been thinking and organising since the beginning of our cognitive evolution, resulting in our human condition.

Unfortunately when we witness beneath the surface of most people's lives, families and our society we generally find decrease. This is evident through the presence of mental ill health, depression, social unrest, materialistic identity, culture loss and the diametrically opposed issues of global obesity and global hunger / wealth concentration and poverty. In the natural world we are witnessing decrease through the depletion of our fish stocks, native forests, top soils, species extinction and multiple forms of pollution.

This is a powerful on going zeitgeist that we are locked into and we are either consciously unaware of its effects or simply feel powerless to alter it. It represents the way we have been organising our world for centuries.

$$d_G^\infty = e_G r$$

$$d_G = (m_G c) r$$

$$e_G = m_G c$$

d_G^∞ Infinite global decrease comes about as a result of

e_G wide spread ego consciousness that has taken form

by the way humanity relates to all things through r relationship in respect to ourselves, our societies and our environment.

e_G Global ego consciousness is the result of m_G the unaware mind of society which we all tend to apply to our

C primary consciousness.

m_G = **unaware mind**

Throughout society relates to what exists already and operates from learnt behaviour, formulated belief systems all of which is ingrained through our upbringing, educational systems, religious doctrine, media and financial and political structures. This artificially creates who we believe we are as people - a complex identity based upon what the world tells us.

A Practical intelligence is predominantly developed to enable us all to function in the world that we are born into, without questioning any of its form or function.

This mind of society applied to

C = **primary group consciousness**

That is reactive and naturally resorts to using the primitive tools of our human nature: defensiveness, anger, blame and selfishness to operate by and to navigate the world.

Creates what we call

e_G = global ego consciousness

Fearful consciousness that believes in the competitive nature of survival - that there is a diminishing supply of resources and in order to have, others must go without.

It seeks control over others and uses various forms of aggression to gain the outcomes it wants and does not like being vulnerable in any way and can become destructive if it believes its existence is threatened.

Ego consciousness becomes global through the disseminating of fearful consciousness into the minds of others.

It sees threat everywhere and is compelled to unite with other like minds in order to destroy a perceived enemy that must be put down at all costs.

This energy ultimately produces unpleasant outcomes and disillusioned feeling states of entitlement and righteousness, but at deeper levels - guilt, emptiness and misery.

r = relationship

All of the relationships formed by this ego consciousness are based on individuals gaining over other individuals or one group gaining over another group. Due to their antagonistic nature these events produce, in the long

term, infinitely depreciating returns and decreasing opportunity.

When this conscious energy is applied to any relationship, whether of a business, religious, legal, political, or environmental nature, we all experience decrease.

The result of this on a **global scale** is that wars are waged, indifference to other humans and animals lives on in the form of abusive and neglect, and the natural world continues to deplete due to a greed that has no concern for generations to come.

All of this adds up to an infinite amount of d_G^∞ **global decrease** continually perpetuating more of the same to materialise.

It is in seeking better outcomes that our growth materialises.

And it starts with us.

Buddha said, 'War is futile as the conquered are unhappy.'

Ghandi said, 'Be the change you want to see in the world.'

Einstein said, 'A conundrum cannot be solved by the same consciousness that created it.'

Therefore if we wish to experience a better life for ourselves and a better world to live in, then a shift in consciousness is needed towards a new way of constructing our world - an authentic way of thinking.

And with more and more people inhabiting the earth the greater the need for this shift to occur at a global level.

A shift to

$$I_G^\infty = E_G R^\wedge$$

$$I_G^\infty = (A_G H) R^\wedge$$

$$E_G = A_G H$$

I_G^∞ Infinite global increase has the potential to come about as a result of an E_G elevated global consciousness which would naturally form R^\wedge ubiquitous healthy relationships.

E_G elevated global consciousness would be the result of an A_G integrated global awareness which we then choose to apply to the attributes of our shared humanity - H human spirit.

A_G integrated global awareness represents for us all an increasing awareness and understanding of ourselves, our primary relationships, society, our global family and the environment. Aware of what our minds have learnt - the context to and structure of society and what constructive and destructive potential this holds.

A place of grander awareness to consciously direct the path of humanity, and a broad social awareness that we all have a choice to use higher level tools derived from what we at Vision for Humanity define as 'Human Spirit'.

H = Human spirit, we all possess this essence of human spirit. It represents our authentic selves and identifies with using the treasures of our highest level tools: love, forgiveness, compassion, tolerance and integrity to form and shape all relationships – and to underpin all that we create.

These truly empowering tools seem harder to master at first. We need to be far more conscious to select them and in a world that operates mainly through an ego consciousness, we sometimes have to be very skilful to enact them. But when we do, they induce positive feelings of happiness, joy, contentment and genuine self worth.

E_G We call this mixture of formulated consciousness – **elevated global consciousness**

The higher aspects of ourselves working together (**A_G** an ever increasing awareness utilising the essence of our **H** human spirit) allowing for healthy relationships to materialise in all we touch.

This is humanity's true north.

R[^] Ubiquitous Healthy Relationships.

When we apply this elevated consciousness to any relationship whether of a business, religious, legal, political or environmental nature we are adding to Global Increase.

The relationships formed by elevated consciousness are based on, and identified by, cooperation, co-creation and co-action where everyone's needs are met.

There is a natural desire for harmony and the wellbeing of others as an inherent prerequisite to be fulfilled. Thus inducing reciprocal actions in others and further appreciating returns.

And what a wonderful world we start to live in when encountering other individuals also choosing to engage in this positive energy to create:-

Reciprocal consciousness that multiplies and encourages

Global Increase. ∞
G

And so...

The more we (humanity) become increasingly aware of self, our primary relationships, society and the environment,

the more the potential exists for what we call A_G

integrated global Awareness.

Subject this greater collective awareness to the transformative tools of the human spirit, and it is possible

to experience an E_G **elevation of global consciousness.**

And at a global tipping point this will inevitably result in the forming of R^A **Ubiquitous Healthy Relationships.**

Widespread collaborative relationships producing truly healthy societies, positive social constructs and a successful planet and coming full circle, healthy individuals.

We call the ongoing product of all of this combined increase for the planet, and for all humanity I_G^∞ **Infinite Global Increase**, having come from the collective power harnessed within humanity. The highest expression, manifesting global peace prosperity and joy.

$$I_G^\infty = E_G R^\wedge$$
